

How to use phpMyAdmin for my account?

**Manuals:**

- **InstallPhpMyAdmin** :: How to install phpMyAdmin?
- **ChangePhpMyAdmin** :: How to change configuration of phpMyAdmin?

**Introduction**

**PhpMyAdmin** is used to manage MySQL databases via Internet. You may create and delete databases, copy and delete tables, add, edit and delete fields, combine databases in a variety of ways.

Attention: In case of GP and Plan lines (excl.20GP) phpMyAdmin is already installed.

**Connection from your domain**

- To get access to your domain: <http://www.yourdomain.tld/phpmyadmin>

login: first 8 characters of your domain name

password: xxxxxxx (password to database)

Note: Login and password you've received in the email confirming activation of the service.

- Access to phpMyAdmin is also possible in Manager v3.

Click "Website hosting" then "phpMyAdmin" in SQL databases.
