

Using MYSQL databases

Introduction

This manual presents the MySQL database

Different steps for building your database

- Firstly, you must create your MySQL database, consult this guide: [HowToCreateBase](#)
- If you have already created your complete database on your computer (with EasyPHP for example), you can import it on our servers by following the procedures on this page: [ImportBaseMySQL](#)
- To create your database, you can use phpmyadmin which is preinstalled on the GP website offers. If you have another type of webhosting plan, and wish to install your database, please consult this guide: [InstallPhpMyAdmin](#)
- Using my phpmyadmin is simple, but it is preferred to have a couple of notions on how MySQL or consult some internet sites specializing on this subject.

Different Technical Problems

- [SaveBasesMySQL](#) :: How to recover a saved database?
- [BackupBaseMySQL](#) :: How do I save my database myself?
- [OptimizeYourBase](#) :: How to run your database and see how it performs?
