

Php configuration

This manual describes how to change variables in the `php.ini` file according to your needs. You may change the `php.ini` configuration under this link:

`http://type of offer.ovh.net/test.php` e.g. for 60gp --> `http://60gp.ovh.net/test.php`

Change of value via SetEnv

You can make changes to **register_globals**, **magic_quotes**, **Zend Optimizer**, choice of php: php4 or php5 via **SetEnv** of a **.htaccess** file. You just need to create this file on your account and enter the directives you need.

Example

```
SetEnv REGISTER_GLOBALS 0
SetEnv ZEND_OPTIMIZER 1
SetEnv MAGIC_QUOTES 1
SetEnv PHP_VER 5
```

The example shows how to turn off `REGISTER_GLOBALS`, turn on `ZEND_OPTIMIZER` and `MAGIC_QUOTES` and use php5. The above options may be used according to your needs. Choose what suits you best!

Configuration of session.use_trans_sid

This option allows you to configure **session id**, so that it is a part of the **url** or appears in **cookies**. You just need to edit **.htaccess** to have the following content:

```
SetEnv SESSION_USE_TRANS_SID 0
```

Session id will be in cookies.

Ioncube Configuration

Attention: The loading of Ioncube requires the deactivation of Zend Optimizer and the use of PHP 5!

```
SetEnv IONCUBE 1
SetEnv ZEND_OPTIMIZER 0
SetEnv PHP_VER 5
```
