

All about geolocalization

Every server has its own IP address. The addresses differ according to the country. It allows identification of the country of the server using only the IP.

Most of search engines use this method to sort the pages according to the language. In that way the page located in France will be faster searched than the same site located in Germany or the United States.

Geolocalization is available for Plan website hostings, for the main domain and the domains attached in MultiDomain? option.

In order to use this option, log into manager, click your domain, select the section **Website hosting** and click the icon **Geolocalization** :

Then choose the IP form the list:

- Install on French IP
- Install on Spanish IP
- Install on German IP
- Install on Polish IP
- Install on British IP
