

How to be informed about an alert on my server ?

Monitoring

All the servers of our Clients along with our entire network is monitored 24h/24 and 7d/7 by OVH's technical team. OVH immediately intervenes when an alert goes off (no response to pings) to minimize the downtime of the servers and the network. If necessary, we will reboot your system and we will run a diagnostic check to avoid further problems in the future.

Log in to your Manager via: **Manager**
Select **Server State** , and then **Monitoring**

To monitor your computer 24/7 with e-mail simply add your e-mail and choose the options.
The emails are sent to administrative and technical contacts by default.
