

YourEmailServer

How to receive mails on my personal server?

Login to manager and click on "**Domains & DNS**".

In "DNS Zone" of the concerned domain, delete MX fields then click on "A type" and add a field as follows:

Sub-domain: mail2.your_domain.com

type: A

Select an IP address: IP_address_of_mail_server

Click on "**Accept**" then confirm the operation. Next, choose "MX Type" and add a field as follows:

Sub-domain: your_domain.com

type: MX

Destination: mail2.your_domain.com

Click on "**Accept**" to confirm the operation. The modifications are taken into account the following morning and your emails are forwarded to your mail server.
